

RIZZA SIMONE

Full stack Developer

I am a passionate Full Stack Developer with over three years of experience, specializing in both front-end and back-end technologies.

I have gained expertise in Vue.js and JavaScript over two years of front-end development. In my most recent role, I strengthened my skills on key projects at Symbol-It, notably with Adeo Leroy Merlin, where I optimized transaction funnels and improved supplier performance.

Curious and dedicated, I thrive in collaborative environments that foster innovative solutions.

EXPERIENCES

Adeo - Leroy Merlin

February 2024 - January 2025

As a full-stack developer at Leroy Merlin, I work within the ELO team on the order funnel project, a multichannel solution aimed at transforming the in-store customer experience. I have also contributed to several other projects within the same environment, including the development of front-end libraries, back-end architecture, and Back for Front (BFF).

- **Task Design and Requirements Gathering :** Collaborate with product managers, developers, and testers to understand project needs, define tasks, and assess technical feasibility.
- **Front-End Development :** Create responsive and accessible user interfaces with Vue.js, ensuring compliance with accessibility standards.
- **Back-End Development and Back for Front (BFF):** Work with Java in a back-end and Back for Front architecture, integrating multiple back-end systems to retrieve, aggregate, and map the necessary data for the front-end.
- **Cross-Team Collaboration :** Work closely with design, QA, and development teams to ensure consistency throughout the development cycle, from design to deployment.
- **Task Management and Product Monitoring :** Oversee the functionality of applications, monitor performance, and quickly resolve issues to ensure system stability after deployment.

- **Product Analysis Abroad** : Participate in international business trips to analyze products on-site, gather feedback from stakeholders, and refine solutions based on real use cases.

Tech stack: Java 17 / Springboot / Project reactor / Vue / Typescript / CSS HTML / Vue router / Github / Vite / Vitest / Vue test utils / Figma / Jira / Méthodologie Agile Scrum

BAO - Storfy

October 2023 - January 2023

Stocky is a web application designed to simplify equipment fleet management.

The application provides access to the fleet, its management, usage statistics, and billing for the equipment.

- The team consists of a PO, a back-end tech lead, three full-stack developers, and a QA
- Designing the front-end and back-end architecture, ensuring seamless integration
- Implementing Docker images to simplify deployment and environment management
- Efficiently deploying the application with Fly.io, ensuring optimal availability
- Creating a robust PostgreSQL database using CockroachDB to ensure data reliability.
- Actively developing the front-end, focusing on user experience and ease of use
- Developing the back-end to ensure solid functionality and optimal performance
- Fully configuring the CI/CD process to automate testing and deployment, ensuring efficient application lifecycle management

Tech stack: Java / SpringBoot / JUnit / VueJs / Typescript / CSS HTML / Vue router / Github, Github Actions / Vite / Vitest, Vue test utils / Fly.io / CockroachDB / PostgreSQL / Figma / Jira / Méthodologie Agile Scrum

Adeo - Leroy Merlin

February 2023 - October 2023

As a front-end developer at Adeo Leroy Merlin, the multidisciplinary team collaborates on a global application for monitoring supplier performance.

This application provides tailored experiences for users based on their roles, with a particular focus on key performance indicators.

- Experience as a front-end developer in a back-end environment using Java SpringBoot
- The team consists of a back-end developer, a tech lead, a designer, a quality tester, a data scientist, and a digital product leader
- Development of various charts using vue-chart.js and chart.js technologies
- Active collaboration on the development of ADEO's internal design system
- Handling internationalization with i18n
- Testing before deployment to ensure application quality
- Deployment in the internal micro-frontend Kobi
- Active collaboration with the designer and QA tester during multiple meetings
- Following the Agile Scrum methodology with regular meetings to discuss user stories

Tech stack: Vue / Typescript / CSS HTML / Vue router / Github, Github Actions / Vite / Vitest / Vue test utils / Figma / Jira / Méthodologie Agile Scrum

Study project

April 2023 - June 2023

Development of a deployable Todo web site to gain hands-on experience in full-stack web development.

- Sign-up and login system
- Security implementation
- Task management system
- CRUD Rest API
- Unit Tests Back/Front
- Internationalization

Back: <https://github.com/Srizza93/todo-spring-back>
Front: <https://github.com/Srizza93/todo-spring-front>

Tech stack: Github, Github Actions; Back-end: Java / Spring Boot / JWT / JUnit / Mockito; Front-end: CSS HTML / Vue / Vite / Pinia / Typescript / i18n / vitest / Vue test utils

Symbol-IT - JS fullstack developer

October 2022 - February 2023

I've worked for the internal projects of the agency Symbol-IT.
This includes the RUN and BUILD of multiple JS projects:

- Colexpress: Order and billing solution for a logistics company
- Proch'Orientation (Hauts de France Region): Tools for the guidance of young people in the Hauts de France region. I participated in the front-end run of the application.
- For Each Academy: Creation of a Discord bot and API integration for processes (channel creation, member addition, etc.)
- For Each Academy: Creation of an application for the management of students' progress.

Tech stack: Vue / Strapi (nodeJs) / CSS HTML / Vuex / Vue router / Github / dockers / NuxtJS

Booking.com - Front-End Developer

January 2021 - October 2022 - 2 years

I have contributed with the build and run of the partners intranet of Booking.com.

In terms of personal learning, I have developed the following projects:

Portfolio development

July 2022 - October 2022 - 3 months

I developed a web project and source code management gallery. The application was designed and developed to support three languages: English, French, and Italian.

- Internationalization - i18n
- Vue 3 / Vue Router / Git

Tech stack: Vue / vanilla JS / CSS HTML / Vuex / Vue router / Github / Webpack / Vite / Jest

Link: <https://srizza93.github.io/portfolio-vite>

E-commerce app

May 2022 - July 2022 - 3 months

I built an e-commerce website that is fully functional and doesn't require a backend for model cases. My tasks included:

- Use of the "fakestoreapi" API
- Creation of the Filtering System
- Development of the Sorting System
- Cart Creation
- Transaction Process Development
- Development of Personal Data Validation Section
- Development of Credit Card Data Validation Section
- Loading Page Creation
- Transaction Confirmation Development

Tech stack: Github, VueJs, Webpack, Vuex, Vue router

Link: <https://srizza93.github.io/sales/>

Social Network app

November 2021 - May 2022 - 7 months

Development of a social network with a news feed, direct messaging, user profiles, post publishing, and comments. My tasks included:

- Use of the "JSONPlaceholder" API
- Creation of the interactive homepage
- Development of the interactive profile page
- Development of the Posts, Comments, and Chat sections
- Technical testing

Tech stack: Github, en Vue js, Webpack, Vuex, Vue test utils, Jest

Link: <https://srizza93.github.io/social/deploy/index.html>

Movie Streaming app

September 2021 - November 2021 - 3 months

Development of streaming app similar to Netflix. My tasks included:

- Use of the "themoviedb" API
- Creation of the Filtering System
- Development of the homepage
- Use of the store
- Creation of the viewing page
- Unit testing

Tech stack: Github, VueJs, Webpack, Vuex, Vue test utils, Jest

Link: <https://srizza93.github.io/streaming/deploy/index.html>

E-commerce app

July 2021 - September 2021 - 2 months

Development of an e-commerce app. The app is functional and without the backend for model purposes. My tasks included :

- Development of the VueJS homepage
- Development of the product page
- Development of the product detail page
- Cart development
- Payment page development
- Transaction process development
- Unit testing

Tech stack: Github, VueJs, Webpack, Vue test utils, Jest

Link: <https://srizza93.github.io/e-commerce/deploy/index.html>

Tooltip plugin

June 2021 - July 2021

A tooltip with specific conditions: Whenever the mouse moves over a target, the tooltip is displayed. The tooltip should be centered with the target, have a maximum width, adhere to the edges, and activate even with dynamically loaded content. The text in the tooltip can be selected without it disappearing.

- Javascript Class development

Tech stack: Github, vanilla JS

Link: <https://srizza93.github.io/tooltip/>

“Square task” game development

January 2021 - June 2021 - 5 months

Development of an online game in vanilla JS to enhance mentoring and learning. The goal of the game: Whenever the mouse enters the page, a square will follow the mouse until it catches up, at which point the square becomes larger and approaches the mouse. The speed of the square increases while the mouse is on the page and decreases when the mouse leaves the page. The square must stay within the bounds of the page.

- Creation of a square on a web page
- Development of a JavaScript class

Tech stack: Github, vanilla JS

Link: https://srizza93.github.io/square_task/
